Synopsis :

Review 'The book is well written, with very few printing errors and clear language . . . It is never banal and is pleasant to read. Indeed, this volume makes a good case against the stereotype view that science books are tedious and pedestrian. Avoiding the quagmires of cheap popularisation, the authors succeed in conveying the excitement of their discoveries and sharing their joy in discussing science with readers. . . . The tone of the authors is sometimes provocative . . . sometimes assertive . . . often captivating, and never prosaic. . . . This book is worth reading, not only for its high scientific content, but also because it teaches us something beyond theories of visual recognition. Milner and Goodale's enterprise is an excellent example of very good science, which does not cost a fortune, springs from serendipity, is based on single-case observations, and is not bothered with immediate pragmatic outcomes.'--Neuropsychological Rehabilitation Read more About the Author A. David Milner is at University of St Andrews. Melvyn A. Goodale is at University of Western Ontario. Read more
